

Quality Pheromones and Trapping Systems

Insects Limited, Inc. researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

Trapper Museum Monitors (100 Traps) (IL-1600)

Product Description

100 Trapper Museum Monitor sticky traps that can be divided in thirds (300) to allow the traps to be hidden in exhibit cases or on storage shelves.

Features and Benefits

These traps are an excellent, general-use sticky trap for crawling pests of all types. They're great for museums or office areas, as well as warehouse and storage areas.

Each trap can be divided into three smaller traps to fit into exhibit cases, onto narrow shelves or in cupboards. The ability to break each trap into thirds gives you 100 or 300 traps per box.

These traps can easily be placed on floors, under furniture, on shelves in closets, or throughout other living spaces, and storage rooms. Insects will blunder into a well-placed trap and will be stuck in the glue upon entering the trap.

Lures can also be placed into these traps for added attraction. The glue on these traps has been designed to remain sticky for more than a year in most environments and is extremely tacky to aid in the capture of even the most robust insects.

How This Product Can Help You

Trapper Museum Monitors offer a trapping/monitoring system that assists with identifying pests in an environment so an informed pest management strategy can be put in place. The kit does this by:

1. Informing if insects are present
2. Indicating where pest insects are coming from
3. Relaying the information about whether control measures (E.g. removal of the infested product, increased sanitation, freezing, etc.) are working or not.

If larger traps appear unsightly in exhibits or within museum cases, these traps can be separated into thirds, giving the user a small, but effective monitor that won't be seen by visitors but continues to monitor 24/7.

What to Expect from Your Product Purchase

When you open this kit box, you will find the 100 traps unfolded, and stacked in the case box. An instruction sheet of how to fold the traps into place is included.

The traps will need to be folded into place by hand, according to the instructions on the back of the kit box. The glue pad on each trap is covered with an easily removed plastic cover that should be removed after the traps have been folded into place.

If the glue from the trap accidentally gets onto your hands, it is not toxic and can be easily washed off using soap and warm water.

The traps are then ready to be placed out in areas where insects are being seen to begin monitoring for any and all pests moving through that area. These traps will give you the information that you need to reduce or remove your pest issue.
